The problems of integrating technology with existing or new furniture causes headaches for almost every retailer. SpacePole® provides a universal solution to these problems by placing the equipment on a unique, modular system of 'plates and poles'. This improves the checkout ergonomics, enhances the safety of the equipment and reclaims valuable counter space.

Improved Space Efficiency

The EPOS equipment is taken off the counter, enabling the most effective use of space available for the processing of customer transactions.

Improved Ergonomics

The position of the equipment can be quickly and simply adjusted to meet the requirements for individual staff members. By improving the ergonomics of the checkout, cashier productivity and accuracy are enhanced.

Improved Safety/Security of Equipment

The equipment can be securely attached to the plates to help prevent accidental damage or unauthorised removal. Trailing cables are clipped to the system to keep them safe and tidy. They could also be run inside the poles to keep them out of sight.
